

10.1.1 Remove Punctuations from the String

Algorithm

Step 1: Start

Step 2: Input string `inp`

Step 3: Initialize `new_str = ""`

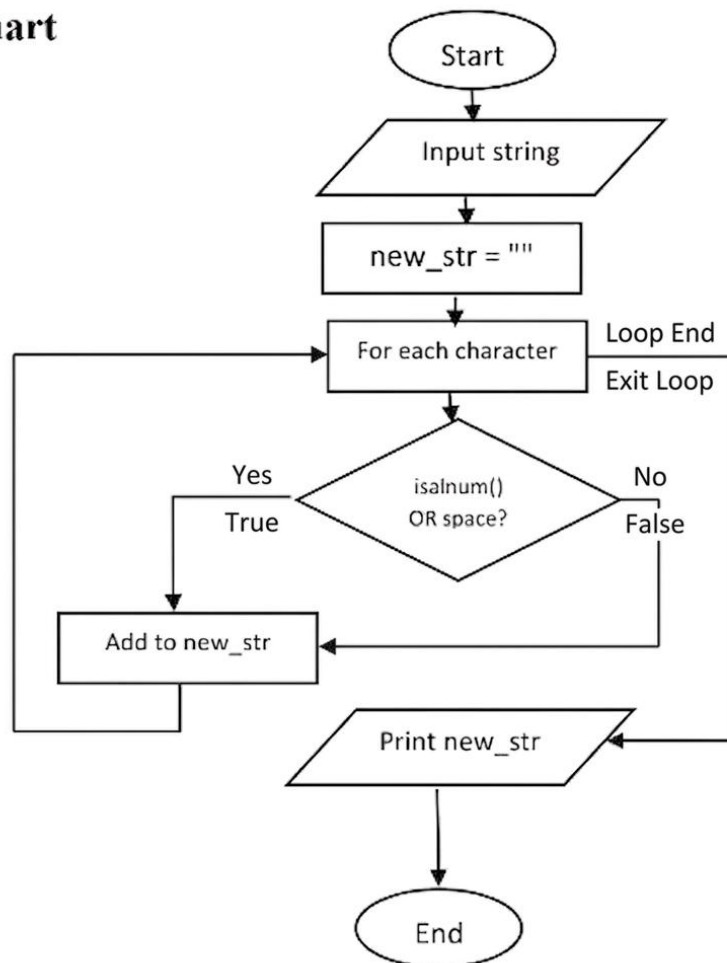

Step 4: For each character in string

Step 5: If character is alphabet/number/space → add to `new_str`

Step 6: Print `new_str`

Step 7: Stop

10.1.1 Remove Punctuations from a String

02:53

Write a Python program to remove all punctuation marks from a given string and print the resulting string.

Punctuation marks are special characters that are not letters, digits, or spaces.

The program should keep all letters (uppercase and lowercase), digits, and spaces, but remove all punctuation marks.

Input Format:

• Single line contains a string (may include letters, digits, spaces, and punctuation marks).

Output Format:

• Print the string after removing all punctuation marks.

Note:

• Refer to sample test cases for better understanding.

Sample Test Cases

Debugger

removeP...

1 inp = input()
2 new_str=""
3 for ch in inp:
4 if ch.isalnum() or ch.isspace():
5 new_str= new_str + ch
6 print(new_str)

Submit
