

10.1.1 Remove Punctuations from the String

Algorithm

Step 1: Start

Step 2: Input string inp

Step 3: Initialize new string new_str

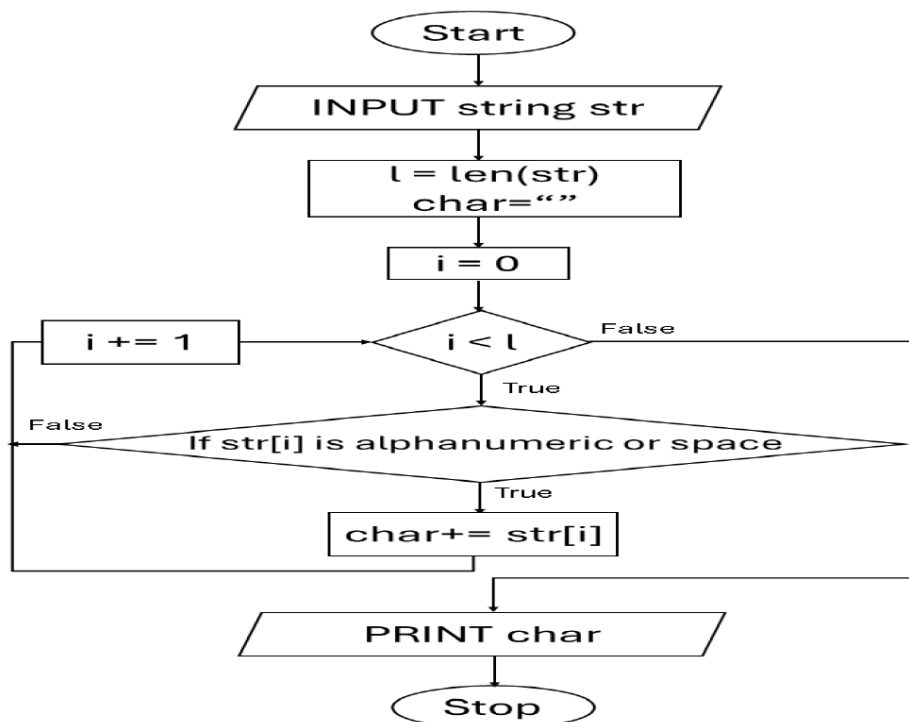

Step 4: For each character in string

Step 5: If character is alphabet/number/space — Yes add to new_str

Step 6: Print new string

Step 7: Stop

Flowchart

10.1.1 Remove Punctuations from a String

Write a Python program to remove all punctuation marks from a given string and print the resulting string.

Punctuation marks are special characters that are not letters, digits, or spaces.

The program should keep all letters (uppercase and lowercase), digits, and spaces, but remove all punctuation marks.

Input Format:

- Single line contains a string (may include letters, digits, spaces, and punctuation marks).

Output Format:

- Print the string after removing all punctuation marks.

Note:

- Refer to sample test cases for better understanding.

Sample Test Cases

removeP...

```
1 inp = input()
2 new_str=""
3 for ch in inp:
4     if ch.isalnum() or ch.isspace():
5         new_str= new_str + ch
6 print(new_str)
```

Average time
0.002 s
2.38 ms

Maximum time
0.003 s
3.00 ms

4 out of 4 shown test case(s) passed
4 out of 4 hidden test case(s) passed

Test case 1 3 ms Debug

Expected output

Hello, World!

Hello World

Actual output

Hello, World!

Hello World

Test case 2 4 ms

Test case 3 7 ms
