

9.1.1 Count Vowels in a String-1

Algorithm

Step 1: Start

Step 2: Input a string and remove extra spaces using `strip()`

Step 3: Store all vowels in a variable ("aeiouAEIOU")

Step 4: Initialize `count = 0`

Step 5: Traverse each character in the string

Step 6: Check if the character is a vowel

Step 7: If yes, increment `count` by 1

Step 8: Repeat steps 5–7 until all characters are checked

Step 9: Print the value of `count`

Step 10: Stop

9.4.1. Count Vowels in a String - 1

10:27

🔍 🌙 🗑️ 📄

Write a program that takes a string as input and prints the total count of vowels in that string. Consider both uppercase and lowercase.

Input Format:

- A single line contains a string that may contain letters, numbers, and punctuation.

Output Format:

- An integer representing the total number of vowels in the input string.

Sample Test Cases

Debugger

vowel_co...

1 text = input().strip()
2 vowels = "aeiouAEIOU"
3 count = 0
4 count = sum(1 for char in text if char in vowels)
5 print(count)

Average time
0.003 s
3.17 ms

Maximum time
0.005 s
5.00 ms

2 out of 2 shown test case(s) passed
4 out of 4 hidden test case(s) passed

Test case 1 5 ms

Expected output
Hello world
3

Actual output
Hello world
3

Test case 2 6 ms
