

9.1.2 Plindrome or Not

Algorithm

- Step 1:** Start
Step 2: Input a string `st`
Step 3: Find length of string $\rightarrow l = \text{len}(st)$
Step 4: Initialize flag `f = True`
Step 5: Set loop from `i = 0` to `l-1`
Step 6: Compare `st[i]` with `st[l - 1 - i]`
Step 7: If not equal $\rightarrow$ set `f = False` and break loop
Step 8: Repeat steps until loop ends
Step 9: If `f == True` $\rightarrow$ print "Palindrome"
Step 10: Else $\rightarrow$ print "Not a Palindrome"
Step 11: Stop

9.1.2. Palindrome or Not

05:28

🔍 🗑️ 🔄

Write a Python program to take a string as input and check whether the given string is a palindrome or not. A palindrome is a string that reads the same forwards and backward.

Input Format:

- A single line of input contains a string

Output Format:

- If the input string is a palindrome, print "Palindrome", otherwise print "Not a Palindrome"

Sample Test Cases

palindro...

Type your code here...

```
1 st = input()
2 l = len(st)
3 f = True
4
5 for i in range(1):
6     >>> if st[i] != st[l - 1 - i]:
7         >>> f = False
8         >>> break
9
10 if f:
11     >>> print("Palindrome")
12
13 else:
14     >>> print("Not a Palindrome")
```
