

## 9.1.1 Count Vowels in a String-1

### Algorithm

**Step 1:** Start

**Step 2:** Input a string and remove extra spaces using `strip()`

**Step 3:** Store all vowels in a variable ("aeiouAEIOU")

**Step 4:** Initialize `count = 0`

**Step 5:** Traverse each character in the string

**Step 6:** Check if the character is a vowel

**Step 7:** If yes, increment `count` by 1

**Step 8:** Repeat steps 5–7 until all characters are checked

**Step 9:** Print the value of `count`

**Step 10:** Stop

9.1.1. Count Vowels in a String - 1

Write a program that takes a string as input and prints the total count of vowels in that string. Consider both uppercase and lowercase.

Input Format:

- A single line contains a string that may contain letters, numbers, and punctuation.

Output Format:

- An integer representing the total number of vowels in the input string.

Sample Test Cases

Explorer

vowel\_co...

```
1 text = input().strip()
2 vowels = "aeiouAEIOU"
3 count = 0
4 count = sum(1 for char in text if char in vowels)
5 print(count)
```

Debugger

Average time  
0.004 s  
3.50 ms

Maximum time  
0.007 s  
7.00 ms

2 out of 2 shown test case(s) passed

4 out of 4 hidden test case(s) passed

Test case 1 7 ms

Expected output  
Hello World!

Actual output  
Hello World!

3

Test case 2 3 ms

Expected output  
3

Actual output  
3
