

11.1.1 Sum of Digits of Number

Algorithm

Step 1: Start

Step 2: Input a number from the user

Step 3: Set $\text{sum} = 0$

Step 4: Check if $\text{number} > 0$

Step 5: Find last digit $\rightarrow \text{digit} = \text{num} \% 10$

Step 6: Add digit to sum $\rightarrow \text{sum} = \text{sum} + \text{digit}$

Step 7: Remove last digit $\rightarrow \text{num} = \text{num} // 10$

Step 8: Repeat steps 4–7 until number becomes 0

Step 9: Print sum

Step 10: Stop

Flowchart

11.1.1. Sum of Digits of a Number

Write a Python program that reads an integer, calculates the sum of its digits, and prints the result.

Input Format:

- The program reads an integer input with the prompt "Enter a number: "

Output Format:

- Print the sum of the digits in the format:

Sum of digits: <digit_sum>

Note:

- Some base code was provided (input and print statements). The task was to complete the missing logic.

Sample Test Cases

+

Explorer

sumofdig...

```
1 num = int(input("Enter a number: "))
2 sum = 0
3 while num > 0:
4     i = num % 10
5     sum = sum + i
6     num = num // 10
7
8
9
10 print("Sum of digits:", sum)
```

2 out of 2 shown test case(s) passed
2 out of 2 hidden test case(s) passed

Test case 1

15 ms

Expected output

Enter a number: 123

Sum of digits: 6

Debug

Test cases

Actual output

Enter a number: 123

Sum of digits: 6

Test case 2

10 ms

Expected output

Enter a number: 123

Sum of digits: 6
